

Resistor

R

Figure 1: R — Resistor Element.

SPICE Form:

Rname n_1 n_2 *ModelName* *ResistorValue* [*IC*= V_R]
 n_1 is the positive element node,
 n_2 is the negative element node,
ModelName is the optional model name,
ResistorValue (Units: ohms; Required)(Corresponds to **r** parameter in the TRANSIM netlist)
IC is the optional initial condition specification. Using *IC*= V_R is used with the *UIC* option on the *.TRAN* line when a transient analysis is desired with initial voltage V_R across the capacitor rather than the quiescent operating point. Specification of the transient initial condition using the *.IC* is preferred and is more convenient.

Model Parameters:

Name	Description	Units	Default
R	Resistor Value	ohms	-

Example:

R 1 1 R1 10.2MEG

Notes:

The actual element is the **res** TRANSIM element. See TRANSIM element **res** for full documentation.
